

Remove
harmful
organic
material with

Oxyshock

When chlorine reacts with organic material like sweat & algae, it can create harmful chloramines which cause irritation of the skin & eyes and often leaves that unpleasant “chlorine” smell.

Smart balance

Use Oxyshock to remove chloramines and save money on other chemicals & algaecides with an occasional Oxyshock treatment.

Additional Benefits

It's easy to apply and rapidly dissolves with no residue so you can resume swimming almost straight away!
